

Protecting your security while using Zoom.

Do **not** click on any link that you may see in your **chat box**

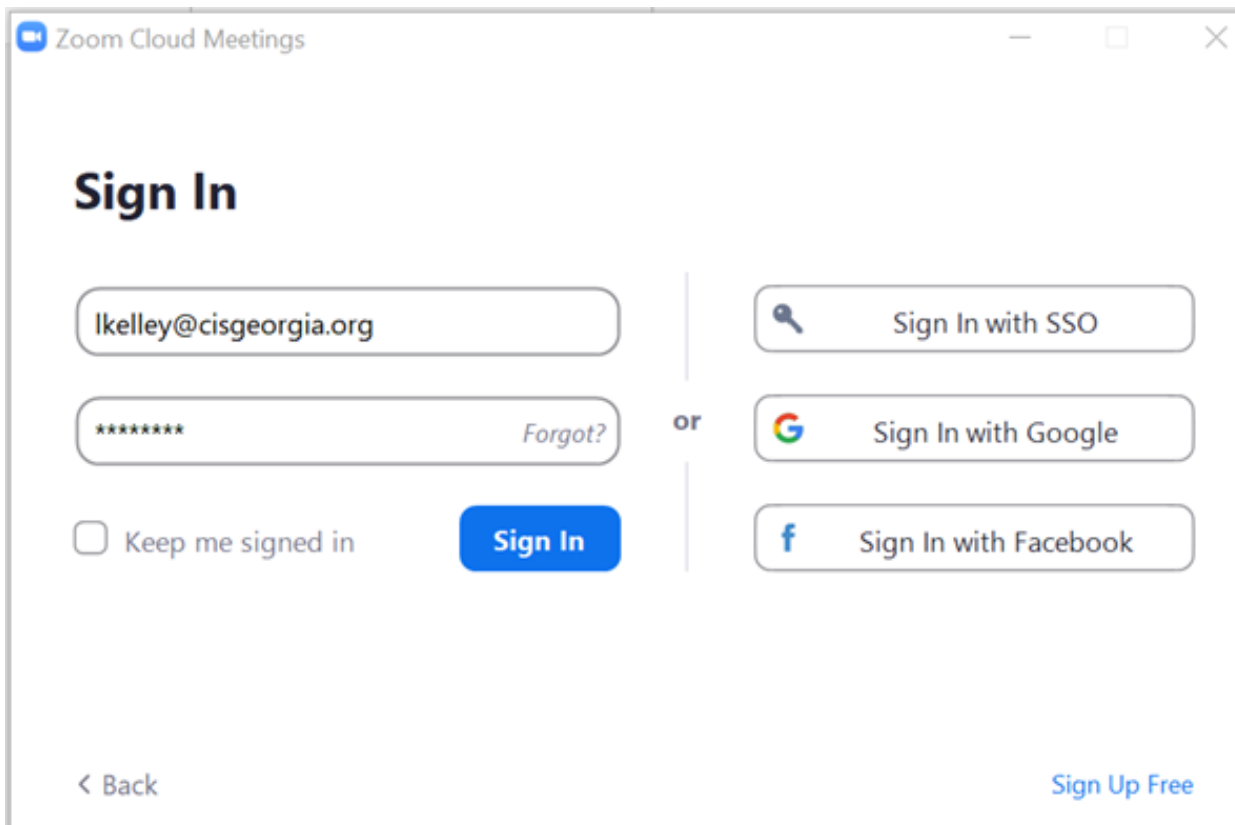

- Use Zoom online (web version) or Update your Zoom Client software to the latest version which addresses this vulnerability

Here is how to check if you have the latest version of the Zoom client software:

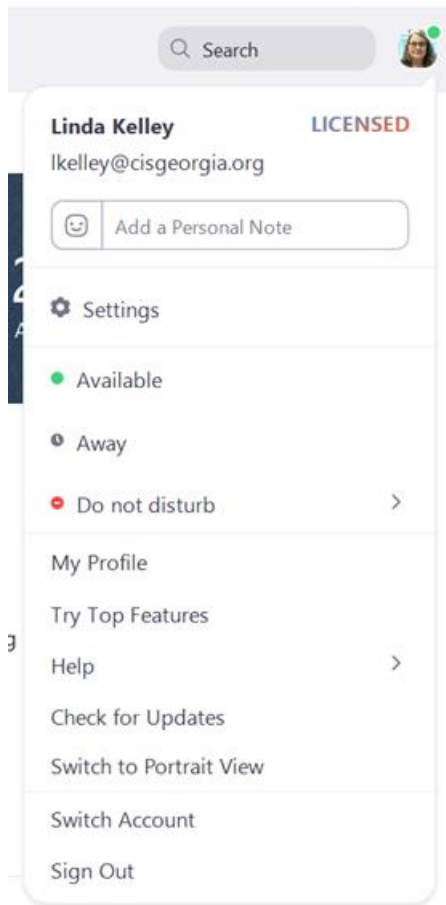

Go to the Start Menu on your computer, scroll to Zoom and click on "Start Zoom" to launch the Zoom client software. **Note:** if you do not have this on start menu, you have been connecting directly to the Zoom web client browser, which does not have this vulnerability.

The client software will load. At the bottom is the version currently installed on your computer. Click on "Sign In" and enter your credentials for Zoom

Once in, Click on your profile at the top right, scroll down and click on "Check for Updates"

If you are not up to date, it will install the latest version and you will receive this message with the version number.

With increased use of Zoom due to teleworking, it's recommended to check for updates every time you use the Zoom Client on your computer or mobile devices.
